

ISO Quality Systems

What is an ISO 9001:2008 Quality Management System?

- A generic world wide accepted baseline of standard process requirements apply to manufacturing as well as service companies
- It provides a comprehensive, yet simple structure for management systems

What are AS9100 / AS9110 / AS9120 Management Systems

- The **AS9100** series is the Aerospace Basic Quality Management System Standard, developed by the major aerospace manufacturers
- **AS9110** is specifically for companies that provide Maintenance or Repair services to Aerospace industry
- **AS 9120** is for companies which buy and sell parts, materials, and assemblies in the Aerospace industry

Who can benefit from the Implementation of a Quality Management System?

While not for everyone, companies of all sizes, products, and services can benefit by adopting and implementing ISO 9001:2008 or AS9100 standards and principles. Benefits realized can include:

- Improved consistency of service and product performance
- Higher customer satisfaction levels
